1. Drawing a Class Diagram Class diagram is a graphical representation of the object-oriented classes. The Visual Paradigm users can use this diagram to create new classes. On the left-hand side, the objects are represented as classes and the properties and methods are represented as data attributes (like private or public). The diagram looks like the following: 2. Drawing a Sequence Diagram Sequence diagram is a graphical representation of the sequential execution flow within the software system. The users can create this diagram using the Visual Paradigm to display the flow of events and to create the sequence that flows through each class within the program. The diagram looks like the following: 3. Drawing a Collaboration Diagram The collaboration diagram is a graphical representation of the interaction between users within a software system. The diagram includes classes which are assigned with different roles (called activity roles) and interactions between them. The users can use this diagram to create new roles and establish the interactions between users in the system. 4. Drawing a Use Case Diagram Use case diagram is a graphical representation of the cases of the use cases within the system. The users can use this diagram to draw and to create the cases that need to be implemented in the software system. The diagram looks like the following: 6. Drawing an Activity Diagram Activity diagram is a graphical representation of the methods and actions that a class must perform in order to carry out a specific task. The users can use this diagram to create the high-level steps of the tasks or activities that need to be implemented in the software system. The diagram looks like the following: 7. Drawing a Deployment Diagram Deployment diagram is a graphical representation of the software components that are deployed into an application environment. The diagram includes classes which are used to represent the deployed software components and the interaction between them. The users can use this diagram to create new classes and the relationships between them. 8. Drawing a Class Diagram The class diagram is a graphical representation of the classes in the system. The users can use this diagram to create new classes and establish their relationships with other classes. The diagram looks like the following: 9. Drawing a Collaboration Diagram The collaboration diagram is a graphical representation of the interactions between users within the system. The diagram includes classes which are assigned with different roles and interactions between them.
