Write in the text box a user-friendly name for the Anti-keylogger for IE 3.

Anti-keylogger For IE [Win/Mac]

Anti-Keylogger for IE works like a charm. The protection is based on using the real text of the form input fields rather than a generated version. All keyboard input in windows is made from keyboard strokes. And the keystrokes are stored in the registry. The registry contains the following key: HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\Input Locale\LastInputOrder Each computer has a different input locale, that's why the LastInputOrder has different values for each computer. The active user has all the inputs with their LastInputOrder value equal to his input locale value. The LastInputOrder value is equal to 0 for the input locale for all system users. Anti-Keylogger for IE use the LastInputOrder value as a key to compare the inputs on the page with the LastInputOrder value. This means that a given value on the LastInputOrder does not exist on the page. When the field input value is different than the LastInputOrder value, Anti-Keylogger for IE automatically prevents the user from entering the value on the input field. Anti-Keylogger for IE checks the LastInputOrder value before proceeding to prevent a double-keystroke. And the main key is the LastInputOrder value. Anti-Keylogger for IE can be used to protect sensitive data like credit card numbers, access codes to online accounts and other sensitive information. Anti-Keylogger for IE is a powerful tool that can protect the user's entire session. Anti-Keylogger for IE does not require registration. Anti-Keylogger for IE is compatible with all versions of IE on the web. Anti-Keylogger for IE is complete and safe. It does not touch your PC in any way. Anti-Keylogger for IE can use either, E-mail or HTTP for data transfer. Anti-Keylogger for IE is a powerful tool that can protect the user's entire session.
