Import and mark-up printed paper: Draw lines, boxes, text and captions directly into your drawings. In addition, AutoCAD will draw the labels you create directly onto your drawing. (video: 1:24 min.) Markup Assist enables you to incorporate feedback from your colleagues in the same way. This feature can import marks and notes from Word or Google Docs, emails, and even in-app text directly into your design drawings. Your colleagues are able to see all comments and changes at once. (video: 1:44 min.) Multi-Level Direct Selection: All paths and shapes are dynamically updated to reflect your latest commands and settings.

(video: 1:22 min.) With dynamic paths and shapes, you can navigate across multiple paths or create multi-path objects. Paths update along your line of action and objects automatically update if they intersect or move with your selection. (video: 1:22 min.) Sketch 3D Models for AutoCAD: With Sketch, you can model and animate 3D objects directly in AutoCAD. Transform, scale, rotate and move in 3D space. (video: 1:13 min.) Convert your 2D drawings into 3D models with Sketch, including mesh objects. Sketch also works great with Plan and Section views and can be applied to any 3D model, including 3D solids. (video: 1:07 min.) Object Selection Grid: Organize your selections and work with more objects in your drawings. Choose your primary selection type and add additional selections with the same type. Use the Object Selection Grid to better organize your selections, for example, keep your layer selections in the top row and place your group selections in the next row. (video: 1:38 min.) Enhanced 2D Objects: Save time and get more done. Choose your view and orientation to work more efficiently. Find the objects you need faster. (video: 1:08 min.) The new 2D objects feature is designed to make your life easier. The objects are organized so you can find the one you need easily. Plus, the new 2D Object type displays, for example, the thumbnail for a UCS object. The new 2D selection type remembers the last position, orientation, and view. It also automatically positions the view to the best fit for your selection.
