Right-click and get started The tool can be accessed by right-clicking a certain entry in Intermapper's 'Map List' component, then selecting the 'Flows Window' from the menu. The main window of Intermapper Flows allows you to quickly determine top talkers and listeners, the protocols that are currently being used, the top sessions or conversions as well as other info for the targeted machines. Discover detailed information about the traffic peaks in your network Intermapper Flows requires the existence of at least one Flows Exporter, as it enables the program to gather and store data from these devices. Supported exports include NetFlow 1, 5,, sFlow 2,, JFlow and CFlow version 5. The collected data can be visualized simultaneously in the form of a graph, a pie chart and a table, in order to cover all relevant areas and help you learn everything you may need to know. As such, you can discover more about the 'Top Host' for a given time interval,(which you can select from the dedicated menu), but also the 'Top Ports, 'Top VLANs' and 'Top Sessions'. The filter functions in the application's ribbon help you define which device

Select a created Intermapper Flows export, then load the results into it, so that you can view them in a convenient graph form. At any time, you can select and click on a pie chart for a closer look at the corresponding information. The pie chart is an essential tool for learning the most important data about the represented servers in a very simple and easy-to-read way. Intermapper Flows Another useful traffic monitor for your network Using a specific export, you can upload the results into Intermapper Flows for a more detailed analysis, which will help you identify the busiest devices and show what activity is happening in a minute-to-minute basis. The graph enables you to see the main traffic flows that you need to know about, both in terms of their volume and their names. From the 'Traffic Statistics' menu, you can define the period of interest, select the target devices, and modify the visualization parameters. The 'Plugins' menu lets you adjust a couple of settings, including the 'HTML' and 'Export to CSV' options in order to customize the exported reports. The 'Export' menu also contains the 'Upload' function, which allows you to reload data from an Intermapper Flows export to a new database.
