Apple has made a great phone for \$999 so the iPhone X is not a cheap one. Apple iPhone X Review Since the launch of the new iPhone X Apple, a face recognition system made into the phone. But it does not work very well. Or indeed, it has been in doubt since its first announcement. From a practical point of view we can not tell the difference with the photos of your iPhone X, the images we show to test this. It is a fact. The iPhone X has the most advanced camera of the models and we have not seen a better one. It offers an aperture that is larger than that of its predecessors. It has five cameras and dual cameras in the front. It has a sensor of 1/2.4 inch and a resolution of 12 megapixels. The sensor is particularly wide and has an incredible dynamic range. Even if it is true that Apple has not mentioned the price of the camera sensor, we can only estimate that to be about \$ 1,000. The video editor has been improved. Apple has created a powerful editor more intuitive to work with and has made editing easier and faster. Moreover, the video editor is combined with the photo editor in one single, greatly improved interface. Even if it is true that Apple has not mentioned the price of the photo sensor, we can only estimate that to be about \$ 1,000. The iPhone X features a 3D Touch with the support of a pressure-sensitive display. This is something that the other models do not have. Apple added several different technologies to improve the screen of the iPhone X. It is now much better than the standard screen. The camera on iPhone X The iPhone X also comes with dual screens, which enables it to play movies in 4K. Finally, the iPhone X is, as the name suggests, made of glass, which is covered in stainless steel. The iPhone X is, moreover, a safe and durable phone. The frame is quite hard and does not feel cheap. It really stands out in our opinion. The iPhone X will not be available in every country. It will only be available

What the magazine says The perfect summer tablet that's your new best buddy, your trusty sidekick, your own business assistant and your daily chauffeur. That's the Nokia Lumia 1520. In fact, it's so far beyond the more affordable range of tablet options that, in the mind of Nokia, the 1520 is the company's flagship offering. It has the premium hardware and specifications that we've come to expect from the best in the world. Plus, it has a fantastic camera, plenty of storage and a generous amount of battery life. What's not to like? There is just one downside. As well as being one of the best tablets ever made, it can also be one of the most expensive. You really have to be prepared to plunk down well over £500 for this tablet, and that's before you've even paid for the data plan. Important Information: As a result of its high price tag, the 1520 may not be the tablet for you. If you're more interested in a premium tablet experience and would rather save some cash, then we'd recommend that you check out our best value tablet of the year, the Asus Zenfone 3.
