The original digital camera for Windows, Keymacro can instantly view and control almost all types of memory cards, and it is an efficient tool that can easily be integrated into one's workflow. With this version of Keymacro we are offering the possibility of an online analysis of your video sequences, enabling users to know and understand their content and thus take correct decisions when editing the content. We will also offer the possibility of an unlimited number of short breaks, allowing you to save time editing and delivery. The new module is very simple to use and requires little or no technical training.

Features & benefits

With this version of Keymacro we will offer the following additional features and benefits:

- An unlimited number of short breaks (5/10/15/20 mins) This makes editing videos even faster!
- A "Mute" button, that will allow you to mute sections of a sequence, as well as a button to quickly go to the next unedited section
- A tool for modifying subtitles, to make them match the speed of the video, thus helping you to perfectly synchronize them to the original video
- The possibility of creating a new feature to save time on editing and delivery (video conferencing, etc)

In the last version, Keymacro allowed its users to easily obtain perfect subtitles by relying on a few simple steps. As an extension of this functionality, we have developed a new system to enable users to manipulate the subtitles of the video sequences by saving the selected section and modifying it. This functionality is very easy to use.

In addition to the features already included in the previous version, Keymacro 4.0 allows for the following:

- The "Playback window" is an extension of the "Display window" and it can be moved anywhere on the screen. It allows you to display two videos at the same time and switch between them without any interruption.
- A tool to manipulate the subtitles, as well as a tool to export the same subtitles as a separate file.

Keymacro 4.0 will be compatible with the following video formats:

In the previous version, Keymacro enabled its users to quickly obtain perfect subtitles and therefore save a lot of time during the editing process. As an extension of this functionality, we have developed a new system that can be used to manipulate the subtitles of the video sequences. This is very easy to use.

Member Manager is a handy and user-friendly piece of software developed to serve small and medium sized organizations in keeping track of their subscribers with ease, enabling them to monitor fee payments or send out mass emails to inform all participants of an upcoming event. The application is able to work with Microsoft Access natively, or with Microsoft SQL Server, the latter requiring however that it be installed on the system in order for Member Manager to connect to with and use it. Basic user interface Subsequent to the uneventful installation, users can run the program right away, as it is not that difficult to figure out and handle from the start. The main window displays a series of buttons that allow users to find current or past members, add new ones, or search through their records for various information. Adding, editing and managing memberships Before anything else, users should define the profiles and membership types that they intend to work with, making it easier to group their members into specific categories, depending on the organization's particular needs. When adding a new member, users can input their name and contact details, as well as the dates they joined or ended their subscription, the assets and profiles that they are assigned or the fee payments. Moreover, users can attach local files to each entry, or input certain notes about them. The existing and past members can all be listed and grouped according to their membership type. Member Manager allows users to send emails to certain individuals, while also being able to create an email list for bulk messaging, in case of an important event. Useful membership managing tool In conclusion, Member Manager is an efficient albeit simple database utility created to assist organization managers in keeping track of their members and their current situation, be they active or not.
