Make macros that will be applied directly to a project code and so are easily saved with a project for the convenience of the creator. KEYMACRO

Example: -- About My Mouse-- set waitonclick 1
on mouseclick () time=counter() if time>25 then
time=0 if time=0 then mouseClick() else
mouseClick() end end -- End About Mouse--

Orphan Words: The ability to have words that will not get stored into a dictionary and so are always ignored. Orphan Words Example: Orphan Words or words that does not get stored in the dictionary are always ignored. Maintain DB: The ability to maintain a database with any data of your choosing and then reload them in the future. Maintain DB Example: Making a music database with music values that can be reloaded and then be used by any

project by the game creator. **Keymapping:** The ability to have a completely different set of commands mapped to specific keys. **Keysetter:** The ability to have a keymapping page where you can type in any key and then it will show you what keys that keymapping is mapped to. **Keysetter Example:** Some keys are mapped to certain sounds and if you map those keys to a key that has no sound associated to it then it will play the sound that has the sound associated to that key. **ZONES:** The ability to have a different set of actions in each zone so that when the player is in the main town they can still get into the forest and vice versa. **ZONES Example:** Say you have a game and in the game you have a main town, a forest, a museum and a wharf. In the forest you can have a pet, in the museum you can have a hidden gem. In the main town you can go to the store and buy some potions, In the wharf you can get lost in a dungeon and a little monster, and not to be forgotten you can visit other zones and work. **NETWORK:** The ability to transmit files over the internet and then be

displayed in a web browser. NETWORK Example: You can make a game and upload it to your server that then can be loaded by people who are connected to the internet. VOICE: The ability to tell people what to do. Voices Example: Say you are making a story mode 1d6a3396d6

All code is written in an easy to learn easy to learn language... C# - Similar to Java Saves your work in one easy to understand workspace then compiles it directly into 100% native Java code. Native: What is Native:... The compiled Java code is actually the same as the code written in Java. ... How it works: Well, here's how it works: • Create a project • Your code is put into the project • In the project, you build the application • In the project, you execute the application It's simply that easy! You can create both console and graphical applications. You can write code without ever touching the mouse and just like that the code you write is ready to use! A detailed and thorough manual is provided which also includes a 50-page source code listing of the project editor. The only downside to this powerful engine is that it only runs on Microsoft Windows and unfortunately will not run on other operating systems. This is due to the extremely

limited operating system that runs on these systems. For instance, in Windows 95, Windows 98 and Windows 98SE, most multimedia functions were removed. You can't even play a MIDI file. In Windows 2000 and later, the multimedia subsystem was reworked so that the creation of new windows is much easier and more powerful than it ever was before. For instance, you can now create a window that combines a scroll bar with a text box or anything else that you like! There are some other limitations too, like you can't do string operations such as concatenate, but they have been so cleverly designed that you can create your own string commands to perform that task. You cannot access:

- Internet
- The clipboard
- File system
- System folders
- CD and DVD
- ZIP and RAR archives

You can't even open a browser! However, you can still do a lot of things like:

- Access to sound effects
- Access to images
- Access to MIDI files
- Access to sounds
- Access to midi files
- Access to sprites (I don't know why this is included!)
- Access to sounds and midi files
- Access to radio

networks • Access to strings and integers • Access to types and arrays • Access to advanced maths functions • Access to files • Debug commands • Camera commands ... and many more things
