I am considering creating a simple site with an email-like functionality to inform users when it's about to expire. I would like the site to be available from a variety of devices and to work offline. My plan is to create the site with Wordpress as a plugin, with a simple form to collect the user's email address, some sort of algorithm to randomly generate a link to the site (this will be displayed in the e-mail that's sent), and then, after the user clicks on

the link, a php mail() function would be used to send the user an email containing only the link. My question is: does sending a large amount of email with html-only content, such as this, pose any security risk, e.g., giving an attacker a back door into a legitimate user's account? I would like to inform users about the site in such a way that it is simple to understand and easy to bookmark, but not in a way that will encourage spam. Updated Review from the Official AutoCAD User Interface and Development Team: Editor's Note: The official AutoCAD User Interface and Development team sent us this official update from their blog. Hi everyone, Thank you for taking the time to review and share your thoughts on AutoCAD 2019. We are really proud of what we have accomplished together, so we'd like to take a moment and talk about the next release of AutoCAD. What's New? If you look at the AutoCAD 2019 list of new features, you'll find many familiar names and features, with an emphasis on user experience and modern capabilities. “Smart Snap” is the first and most important new feature. For the first time, you can snap objects automatically to the nearest grid line. Smart snapping is a huge improvement for more efficient workflows, more accurate and predictable results, and a shorter learning curve. The design process is an evolving concept that people have been trying to get right for decades. The team tackled this challenge head on. You'll notice a similar philosophy, the focus on personalization and meaningful results, in our new and improved Experience. We created a set of unique tools for users to easily express their designs with shapes, labels, and text. AutoCAD's ability to understand your intentions gives you the power to express yourself without getting in the way. There are some great enhancements under the hood for performance, like faster text and better font rendering, but these are too complex to talk about in a single blog post. New features for drafting, model-based drawing, and design projects abound. You can collaborate with colleagues using the latest improved 2D drafting tools, track documents at a hyper-efficient level, or collaborate with trusted customers using MTC. It has been a long journey to get here. We couldn't have
