Zvooke [Updated-2022]

What's New In Zvooke?

The features of Zvooke are: - Realtime audio processing - Combining several waveforms in a single sound - Synthesizing audio - Playback an audio file or a sequence of samples - Realtime MIDI sequencer - Alphanumeric display - Export audio to many formats Zvooke will work even without any host application. How it works: The key to the features is the programming paradigm Zvooke uses. Zvooke uses a highly transparent approach to audio processing and synthesis. The main audio processing engine is coded in C. This is the reason why it can work well in realtime mode, while providing a number of optional features. The algorithmic code for the main processing unit is written in Common-Lisp and uses a number of pre-defined signal-processing functions. This approach makes Zvooke code very portable. The main processing code is a separate library (zvooke.c) and its compiled form (zvooke.o) is included in Zvooke. The same code can be used in many different applications. There are some convenience functions defined for the Common-Lisp environment. Zvooke includes a very handy synthesizer library. The synthesizer uses only the standard Common-Lisp functions. Therefore, it is fully portable and compatible with both Lisp interpreters and realtime audio packages.
