## Portable MiniCap Keygen For (LifeTime) PC/Windows

Portable MiniCap is a lightweight and very efficient piece of software created to offer you the possibility of grabbing screenshots using command-line arguments or the minimalistic graphical users interface that it features. No setup needed Being a standalone tool, installation is not a prerequisite, which means that you can just decompress the archive and run the executable to get started, or launch it from CMD. Consequently, this translates into the ability to work with Portable MiniCap on all compatible systems, from a removable memory device, without a trace on the host computer. Swiftly grab pictures of your screen using command-line arguments The GUI enables you to take snapshots of a specific object or of a selected area, just by hovering your mouse cursor over the targeted item and pressing the CTRL key while clicking your mouse. The grabbed files can be saved to a user-defined destination folder, to GIF, TIF, PCX, PNG, BMP, JP2 or PDF. The command-line usage of Portable MiniCap, however, comprises a much wider functionality, being fully detailed in the 'Help' document. It thus allows you not only to snap images of your screen, but also run an application and capture its window or an indicated region, or compress the generated picture. Moreover, the command-line arguments enable you to copy an image to your clipboard immediately after capture, add a border to it or resize its width and height. The picture can be converted to Black&White, you can remove or flatten the aero mode from Vista and Windows 7 systems, as well as insert Exif comments into the saved file. A straightforward CMD screen snapper To conclude, Portable MiniCap is a useful and reliable program that can successfully assist individuals of varying levels of experience in grabbing screenshots, resorting either to the basic GUI of the tool or to the more demanding command-line interface. ## Portable MiniCap Crack+ With Full Keygen

It's a neat and highly efficient software designed to enable you to take a series of screenshots at a specified interval of time. Create a specific snapshot at a given time Select the starting and ending date of the job and choose the interval in which Portable MiniCap will grab pictures of your screen, gathering together all the necessary pieces of information to process them. Grab screenshots You can also click on a specific object on your screen, such as a button, menu, a window, the open browser, etc., and Portable MiniCap will grab that specific area of the screen. Edit the downloaded files The captured images can be resized, moved or compressed. If you need to remove the border from them, use the export tool to rename the files as they appear on the screen, or change their extension to .ico to open them in an image editor. You can also insert Exif comments into your pictures, and copy the image to your clipboard. Set the interval In order to set an interval for image capture, use the min and max arguments. The range is expressed in number of milliseconds from the starting time to the end. Start right now You can start or stop a job with the min and max arguments. Output files The tool runs in the background and displays a minimalistic GUI that lets you preview the directory or choose a new destination for your snapshots. Once the job is over, you can just export the picture as a PDF, BMP, GIF, PCX, JPG or PNG file. Portable MiniCap Help: The help file also includes a tutorial designed to help you get to grips with the function of the software. Portable MiniCap Screenshots: The software has several useful and practical features. It's easy to customize the screenshot-capture interval, using the 'min' and 'max' command-line arguments. The range can be expressed in a number of different formats, such as seconds, minutes, hours, days, months or years, which means that you can just specify one of them as the interval, without needing to enter a more detailed value. If you want a pause before you take the next screenshot, instead of taking a series of pictures in a continuous way, you can just stop the job or the interval with the 'min' and 'max' arguments. You can use the GUI to quickly pick the location where Portable MiniCap will put the pictures
