Please Subscribe for more videos: Thank you for watching my video, leave a LIKE, COMMENT and SHARE if you enjoy! If you have any suggestions for me please leave a comment. I will be making more videos for you guys but until then keep your eyes open for my channel. ?????? Easy to

Use and Great with Customization! This is a simple utility that's ready to install in under a minute and can be very useful for users of different tastes. For beginners and advanced users, this software can be customized according to your tastes and desires, and let you switch between more than a dozen screens that are stored at once. This program does so with the creation of new desktops that you can set different dimensions and color. The software is also useful

when not having a good power supply that can sometimes cause problems with your PC. You can run a program and have a complete backup of your system, while accessing a complete and secure environment in a set of convenient desktops. Also, if you've already installed a good backup application and are working with your system from your external hard drive, this can also be very useful to have a backup system that saves all your data and enables you to restore it

in just a few clicks. It's a great idea to have multiple systems with different dimensions or backgrounds if you have a PC that is too old and small or is difficult to access, or if you just want to be able to switch between them. When you change the dimensions of your screens or even change the background images, your current desktop gets saved, and you can restore it with a single click when you need it. When you use your computer on the net with shared resources, this software

enables you to have more than a dozen desktops that are ready and waiting for

KEYMACRO is a program to automate mouse movements and keyboard shortcuts via hotkeys. Key macros can be triggered by mouse movements or by keyboard presses. You can create and save macros that can be triggered by the mouse, keyboard or application-specific events. Your

macros are saved to a text file with any name you choose. The filename can be specified when you save the macro. With the Key Macro Editor you can change the hotkey combination for a macro, the mouse-movement sequence and the text to be displayed when a mouse button is held down. You can assign the mouse-movement sequence or the mouse button-down event to any key combination or sequence you choose. You can also choose to display the text that is shown

when the mouse button is held down. For each event there are three different options: Auto, Control and None. The Auto option can use auto-repeat or auto-repeat with hold. The Control option causes Key Macro Editor to wait until the key combination or sequence has been fully released. The Control option can use the key combination or sequence for a hold time, which you can define with a value from 0 to 60. The Auto or Control option causes the first mouse-

movement sequence to be performed when the hotkey combination or sequence is pressed. The Auto or Control option causes the second mouse-movement sequence to be performed when the hotkey combination or sequence is released. You can set which mouse button to move the cursor by specifying it as the destination for the mouse-movement sequence. When you save a macro, the macro filename can be defined to be the name of the

macro itself. For each mouse button there are five different options to specify. You can set the distance the cursor moves per button click, which you can define with a value from 0 to 100. You can also specify the speed of the mouse movement, which you can define with a value from 0 to 100. If you want to use a modifier key, you can specify what modifier key you want to use and whether it should be on down or up. A modifier key is a key that is pressed simultaneously with the

key to be modified. For instance, if you press ALT and then type, the ALT key will not be shown in the Key Macro Editor. To be able to use this key, you should also press the ALT key. You can set what modifier key is used for the first mouse-movement sequence, and what modifier key is used for the second mouse-movement sequence. You can 77a5ca646e
