CycliX Viewer With Key

CycliX Viewer is a flexible and lightweight, Java-based application designed to provide you with an easy to use genome browsing and analysis tool. CycliX Viewer can open multiple tracks and allows you to view the DNA structure up-close. Each sequence is analyzed in detail, enabling you to view the chromosome structure. In addition to browser, it can also analyze sequences and show the genomic architecture for each chromosome. Control panel contains all the tools for user interaction. Main features are: * JBrowse-compatible automatic and user-defined browsers. * Support for automatic parameter setup. * Genomics display. * Geometric representation of chromosomes. * Multiple tracks support (optional) * Unix scripting interface (optional) * CyclonePlots (graphical user interface for visualizing copy number variants) * Quick access to the default genome parameters * Connecting to databases of homology. * Supports a vast range of database formats (GenBank, PubMed, RefSeq, EMBL, UCSC, Ensembl, Target). * User-defined parameters, selection, and filtering. * RepeatMarker. * Link to Gbrowse genome viewer. * View the track of a gene as a function of chromosomes position. * Database of over 2 million protein sequences of GenBank, Metazone and NCBI. * Universal annotation file parser * genome structure display. * visualization of the genome shape with termite. * interactive views. * Statistics for visualization. * Track merging. * support for integrated databases. * filtering. * distance, speed, and similarity viewer.
